DETAILED ACTION

Page 2

Claim Rejections - 35 USC § 112

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

- 2. Claims 1-18 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The ratio of the number of particles having an average circularity or 0.0970 or greater and 0.950 or less cannot be ascertained from the written description. One of ordinary skill in the art at the time of the invention was made could not use or calculate the ratio data.
- 3. The following is a quotation of the second paragraph of 35 U.S.C. 112:
 The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 4. Claims 1-18 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The ratio of the number of particles having an average circularity or 0.0970 or greater and 0.950 or less is vague, indefinite, and confusing. Although it is appreciated by the Examiner that the amounts of particles 0.0970 or greater and 0.950 or less is meant to be low (5% or less and 10% or less, respectively), how this ratio is determined cannot be ascertained from the description. It

Application/Control Number: 10/659,312 Page 3

Art Unit: 1756

is not clear how the fractional values of "3/5 or less" and "7/5 or greater" are determined and how the ratio is affected, especially by a fractional value that is expressed with the qualifier "or less" and "or greater".

Claim Rejections - 35 USC § 103

- 5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 6. Claims 1-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Suzuki (6,746,810) in view of each of Yamazaki (6,475,689), Nishimori (6,617,091), and Tomita (2004/0053154). Suzuki (claims) teaches a replenishing toner image formation method and related applications. Suzuki teaches a similar toner have the same size and a particular shape coefficient (col. 9 and col. 26-29). Suzuki does not specifically teach the average circularity. Each of Yamazaki (col. 14 lines 35-67), Nishimori (col. 14+), and Tomita (paragraph 69) teach the criticality of toner circularity and related shape. It would have been obvious to one of ordinary skill in the art to employ the direct teachings of Yamazaki, Nishimori, and Tomita as the replenishing toner of Yamazaki because of the known use and effect of such toners as specifically taught by each reference.

Response to Arguments

7. Applicant's arguments filed 4-11-05 have been fully considered but they are not persuasive.

Application/Control Number: 10/659,312

Art Unit: 1756

8. The amendment filed 4-11-05 is similar to the proposed amendment of 6-28-05. During the interviews of 6-27-05 and 6-28-05, the Examiner repeated the concerns of the above repeated 35 USC 112 rejection. There has been no clarification or explanation to how the ratio is observed and used. Also, it is unclear to what the specific circle-equivalent diameter is referring. The fractional values are not clarified or explained.

Page 4

- 9. Applicant then argues that this vague, indefinite, and confusing limitation is not taught by the prior art of record. The criticality of the narrow range of circularity is suggested by each of Yamazaki (col. 14 lines 35-67), Nishimori (col. 14+), and Tomita (paragraph 69) and disadvantages when outside the critical range are contemplated.
- 11. Applicant's arguments fail to comply with 37 CFR 1.111(b) because they amount to a general allegation that the claims define a patentable invention without specifically pointing out how the language of the claims patentably distinguishes them from the references.

Conclusion

12. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the

Art Unit: 1756

shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mark A. Chapman whose telephone number is 571-272-1381. The examiner can normally be reached on Monday - Thursday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mark Huff can be reached on 571-272-1385. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only.
